PETERSEN INFLATABLE FLOW STOP (IFS) BY PETERSEN PRODUCTS

www.petersenproducts.com

- Inflatable Flow Stop (IFS)™ High Pressure Pipe Plugging System, 129-8 Series
- Allows blocking a pressurized pipeline without reducing pressure and flow
- Time and cost can be reduced considerably and safety improved by using Petersen® Inflatable Flow Stop (IFS) systems block pressurized pipelines.
- Safety enhanced and Environmental Risk reduced with smaller hot tap hole to help maintain pipeline integrity
- Conforms to out of round pipe configurations for better seal than mechanical stops
- Time and Cost reduced with smaller lighter weight equipment allows and faster deployment
- High flexibility, small deflated diameter allows installation through much smaller hot tap than much heavier costlier mechanical stops.
- Heavyweight Ballistic Nylon reinforced Polyurethane construction for long term reuse Materials such as Kevlar and Viton available for most pressure, chemical, and temperature requirements
- A minimal inflation pressure with water, air or other inert gas will expand the plug thus most of the pressure is applied to pipe ID for sealing.
- IFS Insertion Systems may be used with multiple plug and pipe sizes.

BIO ONE

<https://biotechnology.com/>

Liquid BioOne® - Patented Biological Drain and Septic System Maintainer

Liquid BioOne® is a uniquely effective, 100% natural drain line, septic and grease trap maintainer. Applied on a regular basis after a drain or septic treatment, Liquid BioOne® will help to maintain free flowing drains, eliminate odors and reduce the number of back-ups between scheduled pumpings.

Liquid BioOne® does not contain enzymes or caustic agents and is safer for people, pets and pipes. In fact, Liquid BioOne® displays the Environmental Protection Agency's Safer Choice Program logo that "allows customers to quickly identify and choose products that can help protect the environment and are safer for families."

Adding Liquid BioOne® to your customer's lines and grease traps does not emulsify FOG and move it down the line like other products. Adding these beneficial microbes after treatment on a regular basis will help your customers avoid potentially expensive wastewater surcharges and fines too.
